

New Findings in Structural Heart Disease Care

Significant Rates of Variability in SHD Diagnosis

egnite recently conducted an extensive retrospective analysis using our database of over one million echos to determine the rates at which hospital systems throughout the US are diagnosing aortic stenosis (AS), mitral regurgitation (MR) and tricuspid regurgitation (TR). Leveraging our CardioCare platform¹, we have uncovered significant variability in diagnosis.

77% of Untreated sAS and sMR Patients are Symptomatic²

These findings demonstrate the need for solutions to uncover gaps in care to ensure patients receive timely, guideline-directed therapy.

The CardioCare Platform

CardioCare, egnite's flagship solution, represents a revolution in structural heart program management. Using AI, the CardioCare platform provides a comprehensive view of a hospital's structural heart patient population and helps physicians identify the most at-risk patients.

¹Data collected on 9/30/21. National average includes 35 sites. Analysis includes diagnosis rate of patients from echoed population at the hospital and are depicted from a random sample of sites.

²Representative of untreated patients receiving a moderate to severe or severe diagnosis of AS or MR. Data excludes patients who are receiving a palliative care plan. Percentage based on patient population in CardioCare database from four randomly sampled healthcare facilities.

About egnite

egnite is a digital health company focused on providing artificial intelligence solutions to help hospitals identify and manage their most at-risk structural heart patients. The company is a market leader in structural heart solutions with a vision to improve the outcomes for every structural heart patient in America. egnite's flagship AI platform, CardioCare, has partnered with over 50 hospitals nationwide and leverages the program's big data analytics platform of over one million echos used to elevate the standard of care for thousands of patients. The company is based in Aliso Viejo, California. For more information, visit egnitehealth.com.
