

Human Intelligence Enhanced by Artificial Intelligence

CardioCare Digital Health Platform

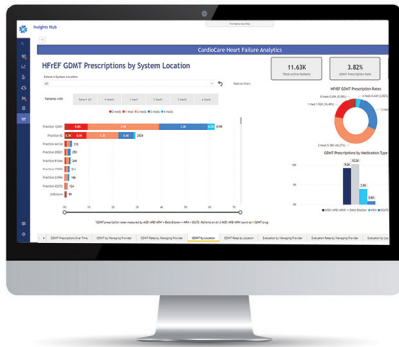

A REVOLUTION IN CARDIOVASCULAR IDENTIFICATION AND MANAGEMENT

What began as a bold idea is now a single-source solution that helps healthcare systems elevate cardiovascular (CV) patient care.

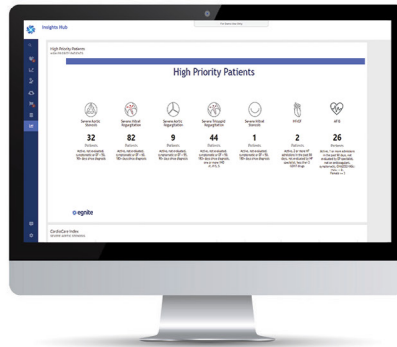

The CardioCare platform applies the power of egnite's big data to a hospital's entire patient population and uses proprietary artificial intelligence algorithms to identify at-risk patients and help physicians prioritize care and guideline-directed therapy.

The CardioCare platform software delivers:

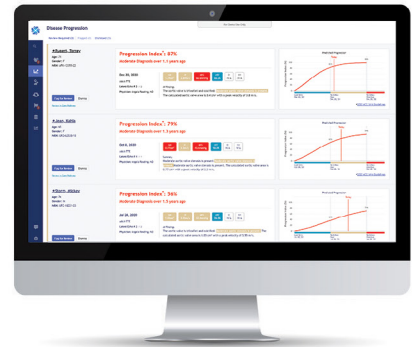

POPULATION HEALTH MANAGEMENT

Automatically identify and manage your hospital system's entire VHD, HFrEF, and AF patient population to ensure they receive timely, guideline-directed therapy

INSIGHTS ON DEMAND

Prioritize care for patients eligible for life-saving therapy

PREDICTIVE ALGORITHMS

Identify patients with a higher likelihood of having under-diagnosed severe disease

Streamlined user interface in the CardioCare platform can improve navigator efficiencies by 42.8%*

66 estimated hours saved in a year*

*Based on a hospital with 10,000 echocardiograms annually based on 13,734 clicks saved at one minute/click. A hospital with 36,000 echos annually would save an estimated 229 hours a year.

The CardioCare platform provides a comprehensive view of your cardiovascular patient population, identifying at-risk patients to help close gaps in patient care.

1 Software Capabilities

The CardioCare platform unlocks access to population health management across the cardiovascular service line:

AORTIC STENOSIS

MITRAL REGURGITATION

AORTIC REGURGITATION

TRICUSPID REGURGITATION

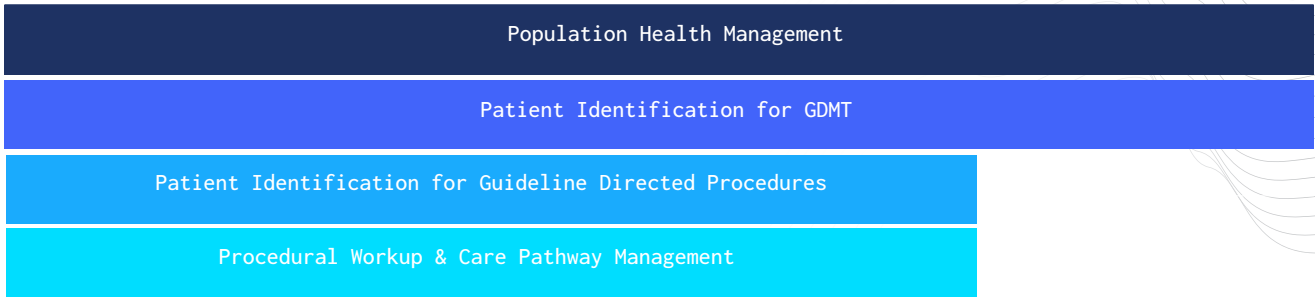

MITRAL STENOSIS

HFREF

ATRIAL FIBRILLATION

2 Powerful Insights

Delivers on-demand insights of your hospital system's entire cardiovascular patient population to reduce variability and ensure patients receive timely therapy:

On-Demand Access to Hundreds of Insights

Examples Include:

- Peer Benchmarking
- Variability in guideline-directed care
- Improve high-risk patient management

Custom Analytics* (30 hours per year)

Examples Include:

- Publication initiatives driven by your Research Department
- Customized research into your patient population
